Abstract (en)  
[origin: EP0311315A2] Lockers made from pressed and punched sheet metal parts have a triangular cross section, preferably approximately equilateral triangular. The lockers can be assembled in runs of lockers with side panels shared by adjacent lockers. In a preferred arrangement alternate lockers (134) are factory built and connected on site by additional parts (138,140) which form further lockers between the factory built lockers.
