Abstract (en)

In an optical apparatus for an optical information recording medium (2) having a light source (6), an acoustooptical element (7, 14) for modulating the light beam emitted from the light source and an objective lens (11) for focusing the light beam emitted from the acoustooptical element to the optical information recording medium, two such acoustooptical elements (7, 14) are provided in an optical path extending from the light source to the objective lens. They are arranged such that directions of travel of supersonic waves generated in the respective acoustooptical elements are crossed to each other.
