Abstract (en)
[origin: EP0311539A1] Cross-country ski with an upper longitudinal rib (3) provided in order to cooperate with a corresponding groove (9) of the sole (8) of the shoe (2), this ski being such that its rib (3) does not have dimensions adapted to those of the groove (9) of the shoe. It is characterised in that, at least in the runner zone located under the shoe (2), at least one anti-abrasion piece is attached to the rib (3) of the ski, this anti-abrasion piece having, moreover, in order to achieve an adaptation between the rib of the ski and the groove of the shoe, an outer profile (11) which corresponds to the profile of the groove (9) of the shoe and an inner profile (12) which corresponds to the profile of the rib (3) of the ski. <IMAGE>
