Abstract (en)

[origin: EP0311691A1] Auxiliary synchronising signals are recorded onto predetermined positions of a recording medium on which the synchronising signals have been periodically recorded in advance, using the same recording means as the one for recording data between synchronising signals. The phase of data read clock signals, whose phase is loced by the synchronising signals, is controlled based on the auxiliary synchronising signals such that the data are favourably read from the recording medium.
