Abstract (en)
[origin: EP0311752A1] Sliding elements (1, 2, 3) equipped with trucks (4, 5) have a single track roller (6) for each truck. When rail bends in the region of a storage location for the sliding elements (1, 2, 3) are being negotiated, unpleasant noises and abrasion occur as a result of the defective guidance of the single track roller (6) of the trucks (4, 5). Noises and abrasion are eliminated completely by slipping on a plastic sleeve (20) with recesses (21) which serve for guidance and which surround the profile (8) of the running rail (7). <IMAGE>
