Abstract (en)
[origin: EP0311824A2] The known paper carrier bags have a foldable box shape made of four outer walls and a bottom. The articles introduced do not stand securely in the bag and can fall over. The new carrier bag is intended to provide a receptacle for goods in a fixed position in a simple manner. This is achieved by a compartment division (8a to 8c), provided in the accommodation space of the bag, said compartment division (8a to 8c) being formed by a foldable paper tunnel (9) which is inserted during manufacture of the bag and is fixed to opposite outer walls (1, 2). The carrier bag is fitted with a compartment division during its production in a cost-effective manner, by which means the articles introduced, such as bottles, receive a secure fixing of their position. <IMAGE>
