Abstract (en)  
[origin: EP0312080A1] A portable carbonator includes a built-in CO<sub>2</sub> supply system which operates on disposable gas generating cartridges. The system requires no electrical power and is self-sufficient and automatic. CO<sub>2</sub> gas is generated by a chemical reaction between reagents which carbonates and/or propels the water. Whenever carbonated water is drawn, the reagents react and generate more CO<sub>2</sub> so as to maintain a constant pressure of the carbonated water.
