Abstract (en)
[origin: WO8808821A1] A freight container for air transport has a supporting frame arranged on a floor board. The supporting frame has a profile projecting above the floor board and a cross-section connected thereto. Planking is mounted on studs on the profile and forms at least a partial shelf together with the supporting frame. The profiles are connected at least partly to junction points by sheet steel corner plates. The sheet steel corner plates (30) are flat and are fastened to studs (27) on the profiles (12 to 16, 18). The studs (27) are flush with the profile (29) and prolong the latter over a hollow profile type section of the profile.
