Abstract (en)  
[origin: JPH027901A] PURPOSE: To effectively utilize an identifying function by locking the exchange member of an accessory piece at the prescribed position of a main body, exposing an ornament attached to a component by moving that exchange member, and separating the component from the main body together with the ornament. CONSTITUTION: The accessory piece provided with an almost loop-shaped main body 1 is equipped with an exchange member 10. At ordinary time, that exchange member 10 is locked at the prescribed position of the main body 1 and further, an ornament 8 attached to a component 2 is exposed by moving the exchange member 10 from that lock position along the main body 1. Then, the component can be separated from the main body 1 together with the exposed ornament 8. This component applies aesthetically beautiful appearance to the accessory piece and operates as the identification mark of the accessory piece.
