Abstract (en)

[origin: EP0313949A1] A colour-photographic silver halide material, in which at least one layer contains a silver halide emulsion with 95 to 100 mol % of chloride, which has been ripened to the optimum with a combination of at least one sulphur ripening compound and at least one compound of the formula <IMAGE> in which R1, R2 and R3 independently of one another are hydrogen or alkyl and X<(-)> is an anion, shows a steep gradation, especially in the threshold and solder regions, coupled with outstanding sensitivity and low fog.
