Abstract (en)
[origin: EP0313970A1] The rack has a bottom part (1), a top part (2), which can be pushed onto said bottom part, and a resiliently mounted connection member (11) for connecting the two parts. An anti-theft safeguard against unauthorised removal of the top part (2) from the bottom part (1) provides for the connection member (11) to be fitted with a shoulder (31) which projects into a hollow (9) in the bottom part (1) and for a locking mechanism, which is likewise arranged in the hollow (9), to be assigned to the shoulder (31), which locking mechanism can be actuated from the outside only using a tool. <IMAGE>
