Abstract (en)
[origin: EP0314037A2] A positive light-sensitive mixture contains a light-sensitive compound either of the o-quinone diazide type or a photolytic acid donor in combination with a compound containing a C-O-C grouping, a binder which is soluble or swellable in aqueous alkaline solution, and a dye which absorbs at a wavelength of lambda = 365 +/- 15 nm of the general formula I <IMAGE> The light-sensitive mixture according to the invention has a higher light sensitivity than comparable mixtures containing other dyes.
