Abstract (en)

[origin: EP0314552A1] The invention relates to an X-ray emitting unit (1) of the type comprising an X-ray tube (3) contained in a shield (2) and supplied under high voltage via an electrical connecting device (21) mounted on the shield (2). According to a characteristic of the invention, at least one part (27) of the connecting device (21) is made of an electrically insulating material which absorbs X-rays, so as to avoid X-radiation leakage.
