Abstract (en)  
[origin: EP0314590A1] Improved sash door characterised in that it opens by rotating about a lower pivoting axis (15), the ends of which are the lower fingers (13) for guidance along vertical slide rails, said lower fingers receiving the fixing of the end of the kinematic connection to the mechanical device for assisting (31) the operation, and being immobilised in the bottom low position by a retention device (22), and in that each vertical slide rail has in the region of each upper finger (14) a device for lateral disengagement for the purpose of permitting the inclination of the door and then its pivoting about the lower axis (15). <??>This invention is of interest to producers of closed hearths for fireplaces. <IMAGE>
