Abstract (en)
[origin: WO8808684A1] Telescopic spring rod comprising a particular device at the extremities to fix the rod directly by pressure exerted between the uprights of the window in an efficient and practical way. The fixation device has the possibility on the one hand to improve the anchoring on hard supports (metal for example) by arranging under the fixations a self-adhesive pad (B), and on the other hand to transmit the pressure of the spring to the fixing point situated outside the rod axis by arranging a piece (A) built-in perpendicularly to the rod, thereby making possible to install the rod away from the window pane. This rod is provided essentially for the installation of curtains simply by pressure, without using tools, on wooden, plastic or metal windows and even for multiple pane windows.
