Abstract (en)
[origin: EP0315327A2] This invention is concerned with a forms assembly primarily intended for use for example in hospitals for recording details of a medical test comprising a backing sheet (1) with a first part (4) intended to receive information about a medical sample and a second part (5) comprising a container for the sample (15) whereby the first part of the backing sheet which is part of a continuous web is capable of receiving information written thereon and the assembly includes a bag with an open mouth to contain the sample and a line of adhesive is provided to the mouth of the bag. The side of the backing sheet and the side of the transparent sheet, both to be contacted by the line of adhesive are of plastics material so that a bond may be made between the backing sheet and the transparent sheet and the line of adhesive.
