Abstract (en)
[origin: WO8809638A1] Preservation device comprising a container (1), a support member (5) comprised of two retaining elements (6, 7) of which at least the first (6) is provided with hooking means (8, 12) for detachably and/or removably fixing said retaining element to the container (1), and fixing means (17-22) capable of connecting the second retaining element (7) in a detachable and/or removable way to the container (1) or to the first retaining element (6), as well as clamping means (17-22) which subject both retaining elements to mutual forces which bring both retaining elements together so that the stem (2) of the plant arranged between both retaining elements is clamped in a way adapted to its diameter.
