Abstract (en)

[origin: EP0316529A2] Edge reinforcement for single- or multi-layer, flat covering and/or separating elements consisting of cardboard, fibre-mat structures of organic and/or inorganic fibres, sheet-like plastics and/or foam materials or the like, characterised in that an edge strip (2) taken in the manner of a film hinge from the main region of the covering element is bent essentially about 180 DEG along a circumferential and/or cutout edge region to be reinforced and is adhesively bonded to the main region of the covering element, preferably forming a suspension possibility for the covering element, for example by suspension tabs, and process for the production thereof (Fig. 5). <IMAGE>
