Abstract (en)

[origin: EP0316563A2] The apparatus comprises a band (13) on a winding core (17) which is mounted rotatably in a frame, the winding core (17) and a band-supply roll (14) being arranged in the frame. To make it possible for two bands (13, 13') to be wound on in parallel with little outlay in terms of construction, it is proposed that at least two elastically extensible bands (13, 13') are wound on one over the other in the band-supply roll and that means (15, 15', 15'', 16, 16', 16'') for the lateral transfer of the bands (13, 13') be provided in the path of the two bands (13, 13') between the band-supply roll (14) and the winding core (17). <IMAGE>
