Abstract (en)
[origin: EP0316573A1] The pillow (1) has a cover, the interior of which is divided into a plurality of chambers (2 to 8) which are filled, if appropriate, with different filling material and/or to a different degree. The pillow can be used and varied in a more versatile manner than known pillows. <?? >Apart from a main chamber (2), this pillow (1) has bulging chambers (3, 4, 5) on at least two of its lateral edges. The pillow consequently has not only one chamber which can be used as a neck roll, but also at least one additional special chamber, on which the head can be supported in the lateral position, but which can also be used, if appropriate, as a neck roll. The hardness of the main chamber (2) and of the individual bulging chambers (3, 4, 5) can be variously adjustable. Furthermore, corner chambers (6, 7, 8) can be provided, in which there is further filling material for the other chambers or which serve as storage chambers for valuable articles or the like. The individual chambers (2 to 8) are accessible by means of zip fasteners (11) or the like. <IMAGE>
