Abstract (en)
[origin: EP0316678A2] The invention relates to a multipole electrical connecting device, consisting of a plug housing and of a socket housing in which there are supported contact and mating contact elements which are connected in suitable chambers to electrical conductors, it being possible to connect the housing to a pivoting joint device and it being possible to lock the housing with a latching device located opposite the pivoting joint device, and it being possible to insert board-shaped magazines, having contact element chambers, in the plug and/or socket housing, which magazines have latching devices which latch with mating latching devices arranged on the housing walls, the plug housing having on the front an insertion opening for the frontal insertion of magazines.
