Abstract (en)
[origin: EP0316905A2] The transferring device for patients has a support (1) and a platform (2) mounted to be vertically adjustable thereon and consists of a horizontal guide, a plate which can be displaced transversely to its longitudinal extent, and a conveyor belt (5) which covers the plate (6) and is anchored to a longitudinal edge of the plate, or connected to a winding-up device, in such a manner that it remains stationary when the plate is displaced. The platform (2) is mounted to be rotatable on or with the support (1) about a vertical axis, through at least 180 DEG , the range of rotation being limited by stops. <IMAGE>
