Abstract (en)

[origin: WO8809369A1] Detergent compositions are provided which have a beneficial combination of low foaming and good wetting characteristics and which comprise a combination of certain selected glycoside surfactants in a specified range of proportions with certain conventional low foaming alkoxyated nonionic surfactant materials.

Abstract (fr)

Compositions de détergents ayant une combinaison avantageuse peu moussante et de bonnes caractéristiques d'humectage, et comprenant une combinaison de certains tensio-actifs de glycoside, dans une plage de proportions spécifiée, avec certaines matières tensio-actives non-ionisantes alcoxylées peu moussantes classiques.
