Abstract (en)

[origin: EP0317805A1] For the transfer of cuboid-shaped (cigarette) packages (10, 11) from a (straight) packaging path (12) to a drying revolver (13) or the like, there is provided a transfer revolver (17) which is designed for the simultaneous reception, the further conveyance and the transfer of in each case two packages (10, 11). For this purpose, pocket units (20, 21...) comprising two adjacent and simultaneously charged pockets (18, 19; 18a, 19a;...) are respectively mounted on the transfer revolver (17). Their pocket walls (outer walls 29, 30 and inner walls 31, 32) are actuated by main levers (36, 37) and supporting levers (38, 39) for opening and closing, the latter being supported on a rotatable cam wheel (42, 43). <IMAGE>
