Abstract (en)

The present invention relates to a rear-entry ski boot with foot securing device. The peculiarity of the invention resides in the fact that it comprises a traction element (10) connected at least at one point to the rear quarter and at least at one end to a means (9) for tensioning and/or adjusting the length of the traction element. This traction element furthermore embraces the heel (5) and foot instep (19) regions of the skier.
