Abstract (en)
[origin: EP0317964A2] An assembling arrangement for a prefabricated wall or facade consists of profiles (10), which can be fastened to a furring at a given distance above one another, and fastening elements (18) for panels (14) to be held on the profiles (10). The profiles (10) have a T-shaped cross-section and can be fastened to the furring (12) by their vertically aligned flange. With their web, the profiles (10) form a bearing surface for a series of panels (14) to be mounted thereon next to one another. The fastening elements (18) are designed as strips which can be brought into engagement by lateral ribs with panels (14) to be mounted next to one another and by notches (22) at their ends to the flanges of profiles (10) arranged above one another. The strips (18) have a T-shaped cross-section. <IMAGE>
