Abstract (en)
[origin: EP0318373A1] This relates to a bracket comprising a crosspiece (10) and, for the support of the latter, two legs (11A, 11B) which, at a distance from each other, are each articulated with respect to this crosspiece (10). According to the invention, securing means provided at the opposite end of the legs (11A, 11B) for joining them together comprise a compasses-type component (20) whose two arms (21A, 21B) articulated to each other are each individually capable of being slidably engaged and positionally adjusted in these legs (11A, 11B). Application to scaffolding brackets. <IMAGE>
