Abstract (en)

[origin: JPH01167407A] PURPOSE: To prevent metal bellows from damage by disposing six axial vibration dampers around the metal bellows. CONSTITUTION: A holder 3 for holding an exhaust gas turbine is connected to exhaust gas manifolds 1 by metal bellows 4. Six axial vibration dampers 6a, 6b are disposed around the metal bellows 4. The axes of the three axial vibration dampers 6a are arranged in the same plane, and the axes of the other three damper 6b are arranged as extending parallel to each other and intersecting said plane. As a consequence, the damage to the metal bellows can be prevented even if a great dynamic force is generated by the exhaust gas turbine.
