Abstract (en)  
[origin: WO8808912A1] The panel is characterized in that it is comprised of a plate (1) made of insulating material and which is inserted during moulding between two cement layers (2) and (3) having different densities and thicknesses, the cross-sectional extremity faces of each panel being arranged in combination to allow for their positioning in axial or angular alignment at 90 DEG by providing them with means for their assembly, said panels being further conformed to cooperate with and being centered with a bottom plate and/or a plate acting as cover.
