Abstract (en)
[origin: EP0318619A1] A package (10) comprises a number of cans (14) or other containers arranged in an array of ranks and rows and a one piece carrier (12) having container encircling bands (20, 22) and apertures (16, 18) located on the cylindrical body portions between the ends of the containers (14) and extending between every pair of adjacent containers (14) to connect the array of containers (14) together to provide a stable, easy to carry package. Each container (14) is held individually without the carrier (12) engaging its chime, and the carrier (12) is not readily divisible without destroying the integrity of the package. A handle (30) is provided along one edge for carrying the package.
