Abstract (en)
[origin: EP0319461A1] 1. A locking device for a bracelet, comprising a base (11, 21, 41), at least one foldable section (1, 3; 23), a locking cover (12, 24, 42) adapted to be depressed by a lateral slewing motion with respect to the longitudinal direction of the bracelet straps, and means (13, 14; 32, 35; 43, 44) for keeping the cover depressed on the base, characterized in that the locking cover (12, 24, 42) is hinged to the base (11, 24, 41) and that at least one of the straps (4, 26) is hinged to the free end of a folding section (1, 23) by an articulation (6, 34) which, when the folding section (1, 23) is folded, bears on the base (11, 21, 41) of the locking device by a portion (7, 31) the thickness of which is smaller than that of the folding section, said portion (7, 31) being held on the base (11, 21, 41) by the pressure of the depressed cover (12, 24, 42) which is locked to the base (11, 21, 41) by said means (13, 14; 32, 35; 43, 44).
