Abstract (en)

[origin: EP0319505A1] Process for the reduction of ores in a tank furnace, in which a solid fuel and an oxidizing agent which is very rich in oxygen are injected at the main tuyeres of the tank furnace, the solid fuel and the oxidizing agent which is very rich in oxygen being substantially at room temperature. The combustion of at least a proportion of the solid fuel is caused to begin before it is injected into the tank furnace, by means of a pilot flame fed with charging door gas or with coke oven gas.
