Abstract (en)
[origin: EP0319640A2] An oboe having a body which consists of an upper joint, a lower joint and a bell, tapers conically and is provided with finger holes, has an increased wall thickness of the upper joint. As a result, blowing the proposed oboe is less strenuous; at the same time, the loudness spectrum of the particular note played is widened and its sound is softer. <IMAGE>
