Abstract (en)
[origin: EP0319714A1] This bracket can be displaced with its base plate along a guide rail which is to be attached to the ski and it can be fixed. The guide rail can be attached to the ski by means of attachment screws which penetrate holes in the rail. In order to simplify the assembly of the bracket, provision is made for bore holes (4) to be recessed in the base plate (2), which extend perpendicular to the upper side of the base plate and have in each case a diameter which is slightly smaller than the diameter of the heads (7a) of the attachment screws (7) to be received, the bore holes (4) being in alignment with the holes (6) in the rail in a predetermined position of the base plate (2) in relation to the rail (5). In this case, the attachment screws (7) are retained by means of their heads (7a) directly in the bore holes (4) of the base plate (2), which is carried out at the factory.
