Abstract (en)

A silver halide color photographic material which contains at least one coupler represented by the general formula (I) or (II-A) and at least one compound represented by the following general formula (III) in the same light-sensitive silver halide layer: <CHEM> wherein R1 represents an alkyl group, an aryl group, or a heterocyclic group; R2 represents a hydrogen atom, or a substituent group; and X represents a hydrogen atom, or a coupling-off group. <CHEM> wherein R represents a hydrogen atom, an alkyl group, an alkenyl group, an alkynyl group, an oxy radical, or a hydroxyl group; R3, R4, R5 and R6, which may be the same or different, each represents a hydrogen atom, or an alkyl group; and A represents a nonmetallic atomic group necessary for forming a 5-, 6- or 7-membered ring; provided that R3 may be linked with R4, R5 may be linked with R6, R may be linked with R3, or R3 may be linked with A to form a 5 or 6-membered ring.
