Abstract (en)
To assist better airflow distribution within a respirator facepiece (1) having an air inlet (4,5) offset from its median plane (II-II), the air inlet has a cover (12) on it with an end wall (16) which is inclined at an acute angle (alpha) to the normal to the axis (0) of the inlet and which has an aperture (17) in it at one edge portion extending into a side wall (15). When the inlet and cover are circular in outline the cover may be rotatable on the inlet and indicia be provided to indicate desired setting(s).
