Abstract (en)

[origin: EP0320343A1] This relates in general to a covering element comprising, projecting over its lower surface, for its application against an underlying element, an elastically deformable sealing strip (32) suitable for matching, at least approximately, the contour of this element. According to the invention, at least over a portion of its height, this sealing strip (32) is divided longitudinally into tabs (34) which successively cover, at least partially, each other transversely. Application, especially, to ridge coverings. <IMAGE>
