Abstract (en)
[origin: EP0320385A1] Device for introducing receptacles (18) containing samples of liquid with a view to their transfer into an automatic analyser. <??>This device (10) comprises a cylindrical drum (11) forming a hub integrally attached to at least two circular crown rings (13 and 14) which are perforated or hollowed out to receive the receptacles (18) while tilting them relative to the axis of the drum (11) which is kept horizontal during the introduction of the samples with a view to their transfer into the analyser. <??>Such a device of low bulk permits an ideal agitation as a result of the rotation and of the tilting of the samples in the course of their introduction. <IMAGE>
