Abstract (en)  
[origin: EP0320404A1] The antenna comprises at least one radiating wire (11, 12, 13, 14) wound into a helix following a body of revolution (1). The antenna comprises a supply circuit (2) for the radiating wire(s) which consists of a transmission line of the strip line type (20), which ensures both the function of distribution of supply and of matching of the radiating wires of the antenna. <??>Application to the construction of circularly polarised radiating antennas for satellite telecommunications, radiolocation. <IMAGE>
