Abstract (en)
[origin: EP0320535A1] In a dry-shaver having a shaving-head frame (2) which can be mounted on a housing (1), the said shaving-head frame is firmly held by a bar (7) projecting from a side wall (5) of the housing and movable counter to the action of a spring (6), which bar can be moved by an operating member (9) arranged on the shaving-head frame to release the shaving-head frame from the housing, the operating member carrying a projection (11) which cooperates with a sloping surface (12) arranged at the free end of the bar and forming a run-down ramp for the shaving-head frame, as a result of which a force component is produced which tends to release the shaving-head frame from the housing. <IMAGE>
