Abstract (en)
1. A pivoting head razor having a fork mounting which is disposed in a shaving head (1) and which is adapted to open and close and to receive, retain and deliver a pivoting head razor blade ; and a resilient cam (13) which engages the razor blade and is adapted to pivot the same around a neutral position and eject the blade upon the discharge thereof, the blade being lockable in the shaving position in the fork mounting (10) by a user-operated locking device (12) which has a locking member and which acts by engaging the blade positively, characterised in that the resilient cam (13) itself is the locking member lockable by the locking device (12) and the resilient cam (13) has an end face which engages a matching surface of the razor blade.
