Abstract (en)

[origin: EP0321360A1] The present invention relates to an offset printing press operating in tandem. This press is characterised in that it comprises two plate cylinders (9, 10) of horizontal and transverse axes, a support (39) for the two plate cylinders (9, 10), which is mounted tiltably about the axis of the blanket cylinder (11), two driving cylinders (25, 26) of horizontal and transverse axes, arranged respectively a little below and towards the outside of each plate cylinder (9, 10), and means for controlling the tilting movement of the support (39) for the plate cylinders (9, 10), for putting each of these cylinders under pressure and for driving the driving cylinders (25, 26) in rotation. <IMAGE>
