Abstract (en)

The braid receiver (31) conveys the braid support (32) along the braiding axis passing through the braiding point (26). The guide tracks (24, 25) are circular, and are offset relative to the braiding axis, whilst at the same time surrounding it. They each guide one of the two groups of bobbin carriers (27). These bobbin carriers rotate in opposite directions and unwind the braid elements (33) towards the braiding point (26). <IMAGE>

Abstract (fr)

Le récepteur de tresse (31) conduit le support de tresse (32) selon l'axe de tressage passant par le point de tressage (26). Les voies de guidage (24, 25) sont circulaires, excentrées par rapport à l'axe de tressage, tout en l'entourant. Elles guident chacune un des deux groupes de porte-bobines (27). Ces porte-bobines tournent en sens inverse et déroulent vers le point de tressage (26) les éléments de tresse (33).
