Abstract (en)
[origin: WO8800870A1] A mounting (1) for accessory units such as bit stops or the like to be mounted on the side of a hand machine-tool has an opening (4) and a locking lever (12) which constricts the opening (4). The lever (12) has at its end opposite the opening a toothing (13) and in its middle lateral support pegs (14, 15) inserted in circular arc shaped guiding slots (21, 22) with sections (24) that deviate outwardly from the circular arc line. The lever (12) is automatically locked in the guiding slots (21, 22). A spring can be totally dispensed with. The lever (12) is easy and handy to use and needs not to be held in the hand in its unlocking position. The construction of the whole mounting exclusively of plastic is very economic.
