Abstract (en)
[origin: EP0321753A2] A refrigerator or freezer (1) has a cuboid housing, in which the rear edge strips (5) of the side walls (2) project beyond the rear side. In the space thus formed, there is a liquefier (9) and possibly lines (10). In order to achieve at the same time simple assembly possibilities for the liquefier (9) and the lines (10) as well as a foamtight rear seal, the rear side of the housing is assigned a rear wall (3) and there is fixed in each case between the rear wall (3) and the projecting edge strips (5, 6) a tightly contacting profiled rail (8), on which the liquefier (9) and possibly the lines (10) are held. <IMAGE>
