Abstract (en)
[origin: EP0321810A2] A connector socket having a contact covering member (4), which can be moved by the associated plug (32), for the electrically conductive contacts (5,6) has a switch (44) which is likewise to be operated by the plug (32), is provided with at least one switch contact (45, 46) and is structurally combined with the connector socket housing (1). In consequence, different switching functions can be carried out with the plug (32) as a function of the position of the covering member (4). <IMAGE>
