Abstract (en)

[origin: EP0321900A1] The centre part (1) of the watch case is made from an extruded strip (2) which comprises a relief structure running in the longitudinal direction of the strip. This structure can serve a purely decorative aim, but may also have a functional purpose, for example that of serving as means for fastening a glass to the centre part. In this case, the relief structure comprises projections (3) which define opposing slides (6) in which the glass can be inserted. <IMAGE>
