Abstract (en)

[origin: EP0321939A2] A process for a curling treatment of hair, for example human hair, rolled up on a body, wherein the deformations of the roller body 3,3',3'',3''', resulting during a curling treatment of hair, are recorded and fed as measured deformation values to a measured value processing device 7 which compares at least one predetermined measured value characteristic, which corresponds to an optimum sequence of treatment, with the measured values and indicates conformity. Additionally, a device for carrying out the method is proposed (Fig. 2). <IMAGE>
