Abstract (en)
[origin: EP0321991A2] The underlying object of the invention is to provide a spray can which allows a spraying operation to be carried out without the operator having to assume unnatural finger positions. The spray can is to guarantee high target accuracy of the spraying jet. The spraying head (3) has on its end region (5) facing the terminating wall (2) a resting surface which is directed away from the terminating wall (2) and with which a release element (6) can be brought into contact, said release element being arranged in the region of the terminating wall (2), being movable manually in the direction of the terminating wall (2), and surrounding the spraying head (3). The spray can can be used for all types of liquids or gases to be sprayed. <IMAGE>
