Abstract (en)

[origin: EP0322370A1] A rear fog lamp comprises a light source (3) and a transparent element (4) having a prismatic internal surface (5) for directing the light rays emitted by the source into an outwardly-directed beam of light. The prismatic surface (5) includes a central zone (9) with first refractors and a plurality of peripheral zones (11, 12, 14, 15, 17, 18, 20, 21, 23-30) with refracting and refracting-reflecting prisms shaped and arranged so that adjacent peripheral pairs of zones reflect the light rays in intersecting directions.
